

Agenda:

NASTF and our partners have prepared a series of presentations to help automaker and aftermarket tool makers and compliance engineers understand the vehicle theft, vehicle and tool security landscape.

Customs and Border Patrol and the Intellectual Property Rights Center on how to protect your devices and brand from IP theft and counterfeiting.

- Where to find the resources that are there to help protect your tools

ETI/NASTF/Automaker aftermarket scan tool security validation project

- Get updates on the status and demonstrations of aftermarket scan tools validating security transactions such as all keys lost or immobilizer programming validations with NASTF for aftermarket tools. This will also include details about how a tool company can implement and interface with NASTF to protect their customers from tool theft and personal injury as well as ideas on using the data to protect your copyrights and determine future product development.

National Insurance Crime Bureau and law enforcement

- How you can assist law enforcement with your diagnostic software design
- How Law enforcement can assist you.
- How NICB and NASTF assist automakers
